

WARNING!

Protect Your Family and Yourself from Carbon Monoxide Poisoning.
Carbon Monoxide (CO) is a colorless, odorless gas which, at high levels,
can cause death.

NEVER IDLE A CAR OR ANY FUEL BURNING ENGINE OR APPLIANCE IN A GARAGE--EVEN IF THE GARAGE DOOR TO THE OUTSIDE IS OPEN. FUMES CAN BUILD UP VERY QUICKLY IN THE GARAGE AND LIVING AREA OF YOUR HOME.

Symptoms of Carbon Monoxide poisoning at moderate levels can be severe headache, dizziness, mental confusion, nausea, or feeling faint. Low levels can cause shortness of breath, mild nausea, and mild headaches. Exposure to even low levels can result in long-term health issues and death. The symptoms are similar to other illnesses such as the flu or food poisoning and are sometimes confused with those.

Ask yourself the following questions:

- Do your symptoms occur only in the apartment?
- Do they disappear when you leave home and then reappear when you return?
- Is anyone else in the household complaining of similar symptoms?
- Did everyone's symptoms appear at the same time?
- Don't ignore symptoms, particularly if more than one person is feeling them.
- Loss of consciousness and death can occur if symptoms are ignored.

If you experience symptoms that you think might be from Carbon Monoxide poisoning:

- **GET FRESH AIR IMMEDIATELY.** Open doors and windows. Turn off combustible appliances and **LEAVE THE APARTMENT.**
- **GO TO AN EMERGENCY ROOM** and tell the Physician you suspect Carbon Monoxide poisoning. Carbon Monoxide poisoning can be diagnosed by a blood test.
- **NOTIFY PROPERTY MANAGEMENT IMMEDIATELY.**
